

Agriform

Long-Lasting

Fertilizer Tablets

Agriform fertilizer tablets are designed for slow, controlled release of nutrients to plants. The tablets supply nitrogen that is needed by most plants. These tablets break down slowly through the action of soil bacteria which convert the tablet to nutrient form that can be absorbed by the plant roots.

General Instructions:

1. **Dig planting hole:** dig a hole deeper and wider than the root ball of the plant.
2. **Placement:**
 - **New Plants:** Place the tablets in the hole, 1-2 inches away from the root tips.
 - **Containers:** Punch holes 2-3 inches from the container rim, 4-6 inches deep and insert the tablets.
 - **Established Trees/Shrubs:** Drill or punch holes 6-8 inches deep around the dripline and between the dripline and trunk.
3. **Backfill:** Finish filling the hole around the plant to grade level.
4. **Store:** Keep tablets in a cool and dry place.
