

## **PLANTING HAZELNUT TREES:**

- Choose a spot in your garden where your hazelnut tree will have enough room to spread.
- Hazelnut trees are not too choosy about their soil as long as it's well draining and has plenty of organic matter.
- Dig the hole twice as wide as the root ball and just deep enough so that the soil line of the tree will be even with the surrounding soil.
- Place the root ball in the soil and fill back up with the soil you removed.
- Tamp down with your feet or hands to remove any pockets.
- Right after planting, water the soil slowly and deeply.

## **HAZELNUT TREE CARE:**

- Water regularly and never let soil dry out.
- Water deeply once a week if there is no rain.
- If you notice slow growth and pale leaves, it might be an indication that your hazelnut tree may need fertilization.
- If you do fertilize, add a small amount of nitrogen fertilizer.

## **HAZELNUT TREE HARVEST:**

- Hazelnut harvest is usually done in the fall.
- You'll know they're ready because they'll simply fall to the ground.
- At that point, rake the nuts into a pile and store them.
