

Don't litter. Recycle or dispose of trash properly.

This includes not only metals, plastics, paper, and glass, but also hazardous materials such as batteries, paints, and other household chemicals. Contact Dutchess County Resource Recovery at (845) 463-6020 to find out about County hazardous waste days, or visit their website at www.dccrra.org for more information.

Gutters and sump pumps

Collect roof runoff in rain barrels, and then utilize this water later on to water your garden. Rain barrels to which you can hook up a garden hose can be purchased or constructed. **OR**

Direct water to grassy or vegetated areas rather than down the driveway and into the street. Lawns will soak up much of the water and cleanse it of pollutants.

Pet waste

Flush it down the toilet. Animal waste material is rapidly absorbed by rainfall and carried into storm drains. The nutrients in it encourage the growth of pathogens and harmful bacteria in our waterways.

Swimming Pools

Before you drain your pool, test the water to make sure that chlorine is not detected. Then direct the drainage to a sanitary sewer, if possible.

Outdoor chemicals

Always store chemicals and cleaning products in a covered area, where any leaks can be contained.

Septic systems

Have your septic inspected at least every two years. A malfunctioning septic system can contaminate not only groundwater, but surface water as well. Generally, septic tanks must be pumped every 3 to 5 years at a minimum.

Don't plant trees or park vehicles over your septic absorption field—this can damage the pipes and lead to leaks.

Refrain from pouring any household chemicals, gasoline, oil, pesticides, or antifreeze down the drain or into toilets; these substances will inhibit the action of bacteria that keep the septic tank system functioning. Additionally, avoid disposing of diapers, cat litter, coffee grounds, cigarettes, feminine hygiene products, and grease into a septic system; they will clog the system's components.

Preventing Stormwater Pollution

Tips for Home Owners-

How you can help protect water quality in your

What's the big deal about stormwater?

If you live in one of the Dutchess County municipalities listed below, your community has been designated a **regulated MS4** (Municipal Separate Storm Sewer System) under the new Phase II Stormwater Regulations.

City of Beacon	Town of Pawling
Town of Beekman	Village of Pawling
Town of East Fishkill	Town of Pleasant Valley
Town of Fishkill	City of Poughkeepsie
Village of Fishkill	Town of Poughkeepsie
Town of Hyde Park	Town of Wappinger
Town of LaGrange	V. of Wappingers Falls

This means that the town, city or village in which you live needs a permit under the

State-wide Pollutant Discharge Elimination

System (SPDES) in order to discharge

stormwater. **Stormwater runoff** is the

rainwater that falls onto

lawns, rooftops, roads,

driveways, parking lots, and

other outdoor surfaces, and

is not soaked up by the soil.

What happens to all of this

water? Most of it flows

into storm drains, which

often flow directly into a

stream or lake, and

ultimately, to a river such

as the Hudson. It can carry with it sediment,

trash, oil and hydrocarbons, metals, nutrients

such as phosphorus and nitrogen, potentially

harmful bacteria, and toxic substances into these water resources. This water may then become muddy, harmful to fish and wildlife, and unsafe for recreation. This is known as **nonpoint source pollution**.

Although you may think of a stormwater discharge pipe as a point source because the outflow enters a stream at a single point, contaminants in the pipe are accumulated from all over the surface of the **watershed** (area of land drained by a given stream or outfall pipe). Rain or snowmelt picks up pollutants and carries them downhill in pathways that flow together to one location.

How can I minimize stormwater pollution?

Many people do not realize it, but there are a number of simple things that homeowners can do to minimize water pollution.

Home repair

If you are a do-it-yourselfer, use non-toxic, biodegradable products. Before you begin an outdoor project, locate storm drains and be sure that they are protected from any

materials that the work may produce, including mortar, concrete, debris, and other substances. Paint brushes and other application tools should be cleaned indoors rather than washed outside with the hose.

Your lawn and yard

When applying pesticides, do so in dry, calm weather. Follow the recommended application rate on the label.

Spread grass clippings back on the lawn. This returns nutrients to the soil.

Otherwise, sweep up yard waste rather than spraying it off the driveway with a hose.

Plant debris can be used as mulch or turned into compost.

Don't apply fertilizer right before rain, it will be washed out and wasted. It takes time for biochemical processes in the soil to incorporate fertilizer.

Select native grasses and other plants—they tend to require less water and less fertilizer.

Test your soil - do you really need fertilizer?

Good farmers test their soil before they invest in fertilizer or manure. Find out the blend of nutrients your lawn needs.

Call Cornell Cooperative

Extension for an inexpensive

soil test, at (845) 677-8223

x115. Excess fertilizer is not taken up by plants, but runs off into streams and lakes, where it

leads to algae growth and fish kills. Fertilizer can also leach into groundwater, the drinking water supply for most of Dutchess County.

Conservation planting

When soil is washed off the surface of the land and into a water body, it becomes a pollutant itself. If you have planted grass seed in a bare soil area, keep it covered with a tarp or burlap until

germination occurs, especially during the winter. Don't mow your lawn to the edge of a stream—maintain trees and shrubs near the edge of the bank. These plants have deeper roots more capable of holding soil in place.

Washing your vehicle

Do it on the lawn, not in the driveway. Soaps and accumulated "dirt" can harm our waterways, but lawns filter out these contaminants. **OR**

Better yet, go to a car wash where the dirty water can be properly discarded.

Maintaining your vehicle

Use only as much windshield washer fluid as you really need.

Check periodically for leaking oil, gasoline,

engine coolant, and transmission, brake, and power steering fluids.

Use cat litter, sand, or other absorbent material to clean up oil or chemical spills.

Don't pour used automotive liquids into storm drains—have them recycled.
